

- Fortified with the Plaster Edge Admixture
- Marble and Quartz Blend
- Long Lasting and Durable Plaster Finish
- Applied by a Wet Edge Certified Installer

## Blue Hue

Products are grouped by the water color hue they cast in **most cases**. Products are displayed in the order of their intensity level within each hue. For more information on water colors download our free eBook **Water Color Hue Guide** at [www.wetedge technologies.com/watercolor](http://www.wetedge technologies.com/watercolor)

The illustrated water color examples were created to show a range of possible colors. The water color will vary due to a variety of influences.

For an extra dimension of color we have included Quartz FX® in some of the Altima® Pool Finish colors. The Quartz FX® is coated with a proven and time-tested enamel resin that is extremely chemical and U.V. resistant.

You can expect the color of the water to vary depending on a variety of influences such as the position of the sun, whether the day is sunny or overcast, the pool design, the landscaping around the pool, and the pool depth. Water color is considered to be subjective and your watercolor will be unique to your pool and its surroundings. Product samples may vary from printed samples. Finish color and consistency may differ due to variations in natural materials, plastering techniques and pool water chemistry. Ask your contractor for a product sample. It is recommended that you view several pools when making a choice on a WetEdge pool finish. Some WetEdge Pool Finishes contain shell blend or moon dust which are crushed abalone and mother of pearl shells. Because of the unique composition of these shells they are not guaranteed from long-term breakdown or loss of color due to pool water chemistry.
